

Now Available from **MILLENNIUM R/C!**

New X-Gear for Slow Stick X
(adaptable to many other planes as well!)

**Carbon Fiber and ABS Plastic/Nylon blend
make the new X-Gear durable and lightweight!**

Millennium R/C's new X-Gear was designed for their Slow Stick X or the GWS Slow Stick, but is also adaptable to several other R/C models, as it can be mounted to a stick fuselage or adapted using the included adjustable mount to fit almost any light model airplane such as the E-flite Mini Edge or Mini Ultra Stick. The new landing gear provides more stability and strength than the original GWS wire Slow Stick landing gear, thus improving the taxi-ing and landing experience, plus, it has the advantage of being easily field-repairable with replaceable carbon struts. This innovative landing gear will be included in Millennium R/C's Slow Stick X ARFs, as well as sold separately. The plastic parts are currently available in black, but will soon also be available in a variety of colors: Blue, Red, Yellow and White.
Suggested Retail Price: \$14.95

**Easy assembly, repair and adaptability to other planes
makes X-Gear a great choice in landing gear!**
