

## Mark Smith's Thermal Wax

**Original - Never Spoils**

The wax is applied by rubbing it on over the wings. This does two things: it flattens the airflow to allow a smoother boundary making the surface stickier, which helps pilots control thermal handling, launching, and speed. Thermal Wax acts as a surfactant to aid moisture dispersion from air in extreme atmospheric sessions.

Packaged by Old Buzzard's Mfg. Co.  
Albuquerque NM 87101  
Under the license of Smith Inc. 1971  
Part Number 91-1971

The wax is blended with the finest natural products available.  
It's a proven winner and you will be one too!
